

MANIFOLD BOX MAGNELIS

FOR INSTALLATION ABOVE GROUND. UP TO 6 CONNECTIONS.

A SMART ALTERNATIVE TO COLLECTION CHAMBERS

The cabinet facilitates both installation and adjustment. A large removable cover, equipped with EBR locks, creates ample space to access valves, etc.

MAGNELIS

The Cabinet is made of Magnelis. This panel provides excellent rust protection, it is up to 10 times better than ordinary galvanized steel and has the highest Corrosion resistance class of C5. Simply superior rust protection, and a good choice for our environment. As well as that the cabinets are also painted, both inside and out. This provides a very long service life for the product.

VERSATILE AND FLEXIBLE

The manifold cabinet can be installed against the facade or mounted on a concrete foundation. 6 connections can fit in a cabinet and they are easily connected together up to 18 connections.

In the standard version, the distribution cabinet comes with the 90mm riser and Tacosetter Hyline valves in DN 32. Other valves are available as an option.

The riser can be taken back, left, or right.

Door with EBR lock.

Detachable plate for easy installation.

Raising legs for casting in concrete blocks.
