# MANIFOLD CHAMBER - COMPACT

## UP TO 12 CONNECTIONS. REQUIRES LESS DIGGING.

The Compact chamber is made of polyethylene and designed to have a more compact format that makes installation easier. Height is only 570mm. Up to 12 collectors can be connected to each chamber and if necessary, multiple chambers can be connected in series.

Composite lid 15kN with adjustable telescope as standard. Cast Iron lids for 40 tons are available as an option. In the standard version, the Compact chamber is equipped with our new balancing valve made of fiber-reinforced plastic, but can be equipped with most models of valves in our range. Each chamber undergoes several tests to ensure no leaks.

All components in the chamber are pressure tested with 5 bar for 10 minutes to ensure the system is tight. The pressure test includes main pipes, connections and valves.
