MANIFOLD CHAMBER DN1200

UP TO 20 LOOPS

THE GAME CHANGER

The MuoviTech Manifold Chamber System has a lot of benefits compared to a traditional reverse return design. You will save costs and time. You use less excavation, back fill, pipes, fittings, joints and land area. Each borehole is controlled separately.
See figures and details at **www.muovitech.com/gamechanger**

DN 1200 is made of polyethylene and is designed for projects where a larger chamber with many connections is needed. Up to 20 loops can be connected to each chamber and, if necessary, several chambers can be connected in series.

COVERING LID

Fixed polyethylene push on lid and gasket, with stainless steel locking bolts are standard.
Vehicle proof access cover up to 40 tonnes or a lockable composite 1.5KN lid.
All are available with an adjustable telescopic riser extension.

CONTENT

The standard version of DN 1200 is equipped with our flow meter, Tacosetter Hyline, which is made of reinforced plastic. This provides a safe system that is not affected by corrosion. DN 1200 can also be equipped with most models of valves and flow meters.

EACH CHAMBER IS PRESSURE TESTED

Each chamber undergoes hydraulic pressure tests to ensure that the chamber and the manifold components are sealed and leak free. All connections passing through the chamber wall are welded to the chamber to prevent ingress of ground water.

CUSTOM SPECIFICATIONS

Contact us and we will meet your preferences regarding orientation, valve flow rates, header dimensions and number of connections.

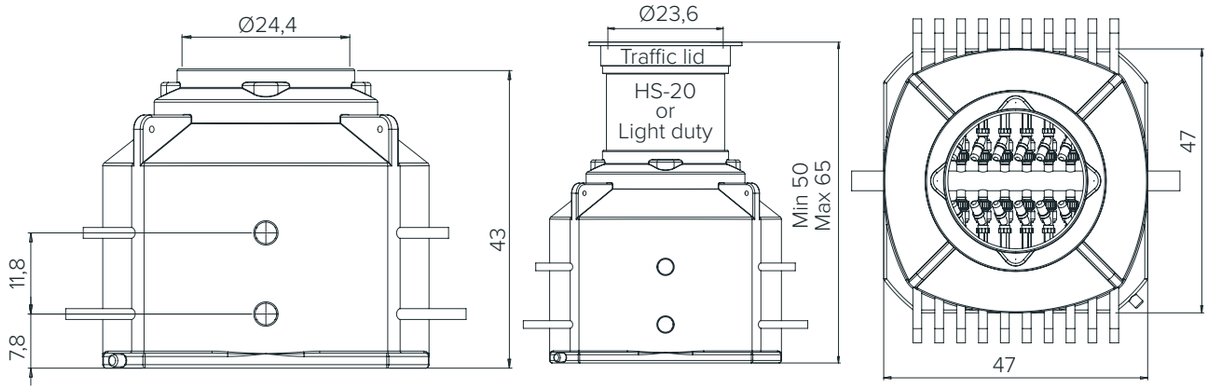
MANIFOLD CHAMBER DN1200

PRODUCT INFORMATION

Dimensions excl. extension ring:	47x47x43 Inch
Material:	Polyethylene with UV protection
Colour:	White
Header:	Ø 3-6 Inch
Connections:	Up to 20 x loops, Ø 1¼ - 1½ Inch



ACCESSORIES

TacoSetter Hyline DN32 *
Ball Valve DN32 *
Air Vent Mefco DN25 *
Composite cap Light duty
Vehicle proof cover HS-20
Plastic cap *

* Included as standard.
